

Preservation of Structures

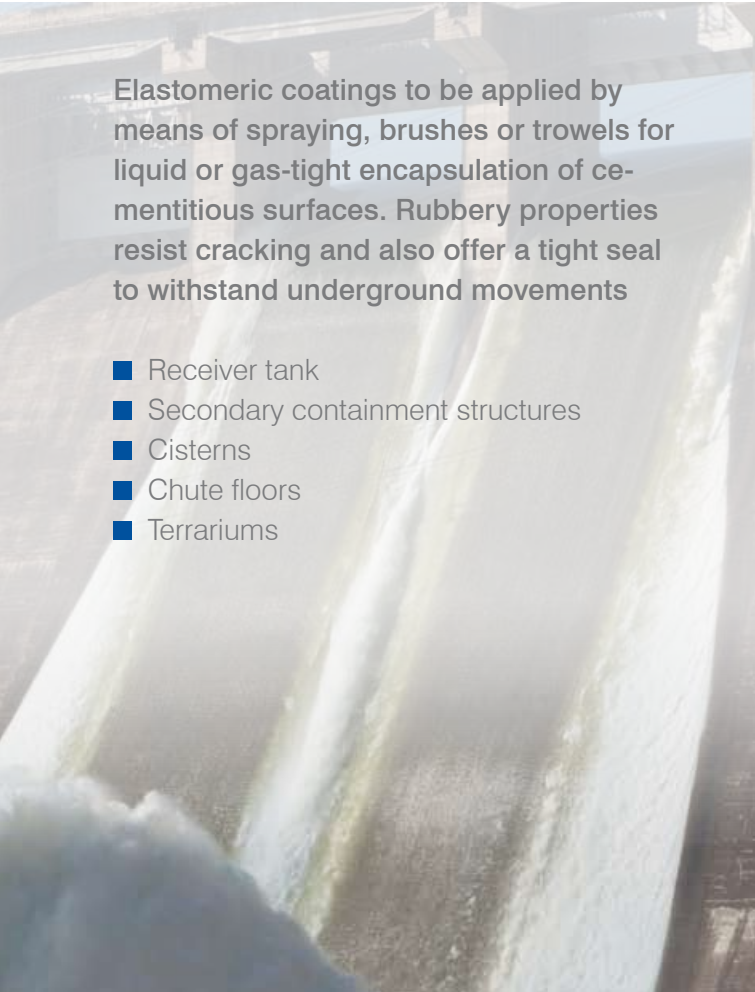

MetaLine Repair and Coating Systems

Concrete constructions

Elastomeric coatings to be applied by means of spraying, brushes or trowels for liquid or gas-tight encapsulation of cementitious surfaces. Rubbery properties resist cracking and also offer a tight seal to withstand underground movements

- Receiver tank
- Secondary containment structures
- Cisterns
- Chute floors
- Terrariums

- 1 One of the strengths of MetaLine is its ability to be used in situ
- 2 A seamless liquid rubber coating offers protection to concrete against liquids
- 3 Easing cleaning and slip protection in animal housings
- 4 Not for passing over but for safe pedestrian traffic . . .
- 5 MetaLine – not only leak-proof but also extremely wear-resistant
- 6 Permanently elastic linings to prevent cracking
