

Accident Protection

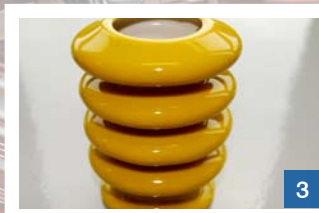

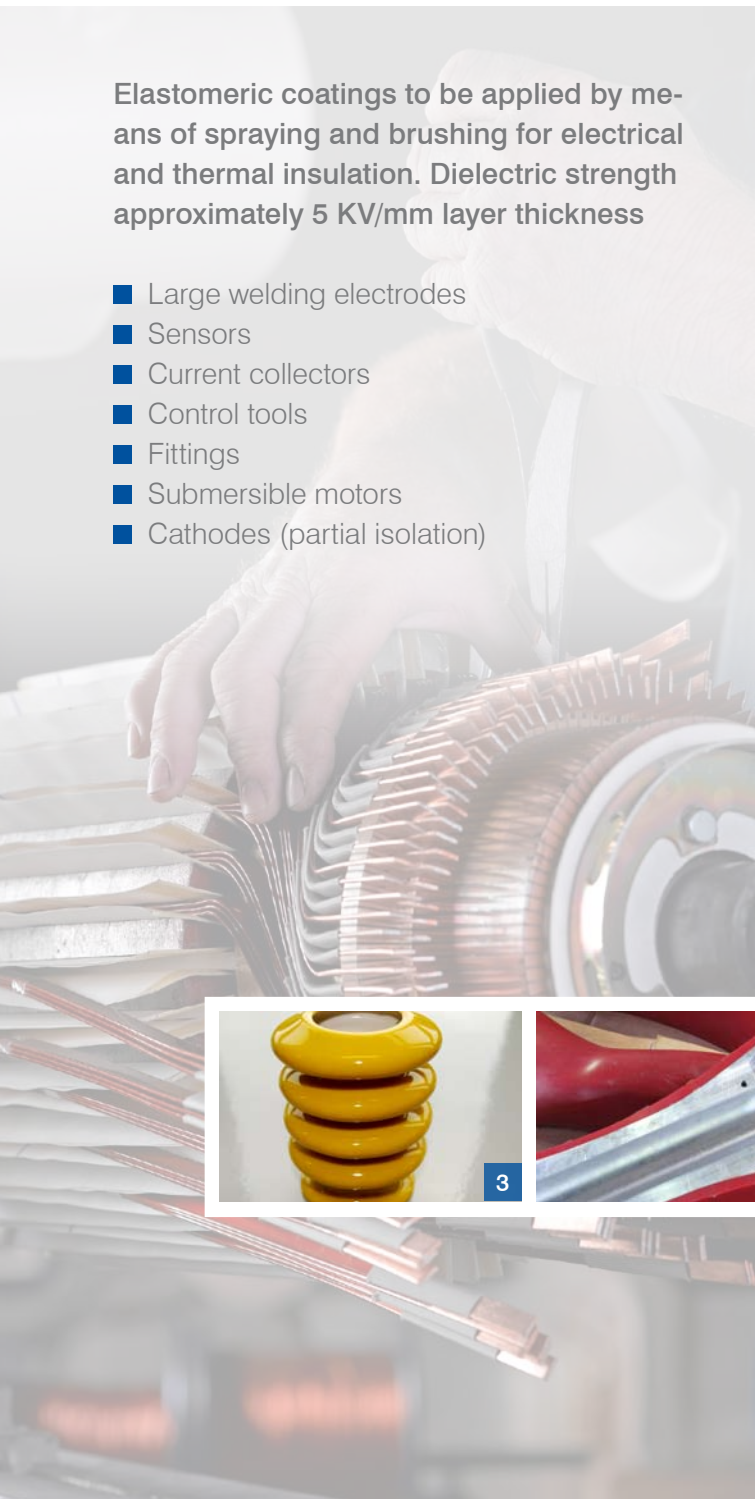

MetaLine Repair and Coating Systems

Electrical insulation

Elastomeric coatings to be applied by means of spraying and brushing for electrical and thermal insulation. Dielectric strength approximately 5 KV/mm layer thickness

- Large welding electrodes
- Sensors
- Current collectors
- Control tools
- Fittings
- Submersible motors
- Cathodes (partial isolation)

- 1 *Decorative and seamless – elastomerically and permanently isolated*
- 2 *Coated test plug – protects tester and specimen alike*
- 3 *MetaLine is suitable for insulating complex geometries*
- 4 *The lining thickness influences the extent of the insulating effects*
- 5 *Waterproof and seamless electrical insulating coating*
- 6 *Agreeable and safe grip – offers protection against current flashover*
